

## **Insects**

### **(Story word: attack)**

This planet has a lot of insects on it. Insects (or bugs) are often pests and can attack planted crops, animals, and us, as well.

The cricket is an insect. It is big and black, and it can jump as fast as a frog. In fact it must, for it is often hunted by frogs.

The ant is not as big as the cricket. Ants are strong, and they dig long, twisted tunnels that connect well.
